- GNBAHN – Track survey system
 - Why track survey
 - Traditional track survey
 - Satellite aided track survey
- GNTRANS – Coordinate transformation
 - Modern coordinate system
 - Other coordinate systems
 - Case study: Germany
 - Local transformation
 - Adjacency preserving transformation
 - GNTRANS in Germany

Track survey - Why

- Motion dynamics
 - Safety, Comfort, Speed
- Length management
 - Endless welded tracks
 - Risk of twist and splits
- Track determination
 - Theoretic/real comparison of track
 - Offset determination
 - 3D survey of real geometry
 - Computation of theoretic geometry (straight line, clothoid, gradient, ramping, ...)
 - Re-construction

Traditional track survey

- Track determination on special points
 - Surveying of near track traverses or pylon bolts (free stationing)
 - Distances between pylon bolts
 - Rise of arc measurement by long chords
 - Only several points, approx. all 5 m
- Rise of arc measurement by long chords
 - Traditional manually
 - Laser long chords by EMSAT

Traditional track survey

- Height measurement
 - Geometric levelling
- Superelvation and gauge
 - Portable measuring instruments

Characteristics of traditional track survey

- Manual measurements
 - High effort for human resources
 - High effort in time
 - Post processing
- Automatic measurements
 - Stop of railway traffic required (closed railway)
 - Risk for periodic offsets
 - High effort for equipment (investment and maintenance)

GNBAHN - Principle of satellite aided track survey

- PDGPS (precise differential GPS) / RTK
- Superelevation with inclinometer
- Gauge with extensometer

- Use of **GPS and GLONASS** (GNSS)
- Rigorous processing of **multiple reference stations**
- Optimal modeling of GPS error budget through **undifferenced observation**
- Absolute **antenna calibration** considering antenna tilt
- **Mitigation of** systematic **multipath** through moving SURVER
- **Signal to noise weighting** of satellite observations
 - ➔ **Fast ambiguity fixing (5 - 10 seconds)**
 - ➔ **High reliability**
 - ➔ **High accuracy**

GPS/GLONASS Reference Station

- Provides correction or raw data
- Equipment
 - GPS/GLONASS receiver and antenna
 - GSM/Radio modem and antenna
 - Micro computer
 - Power supply

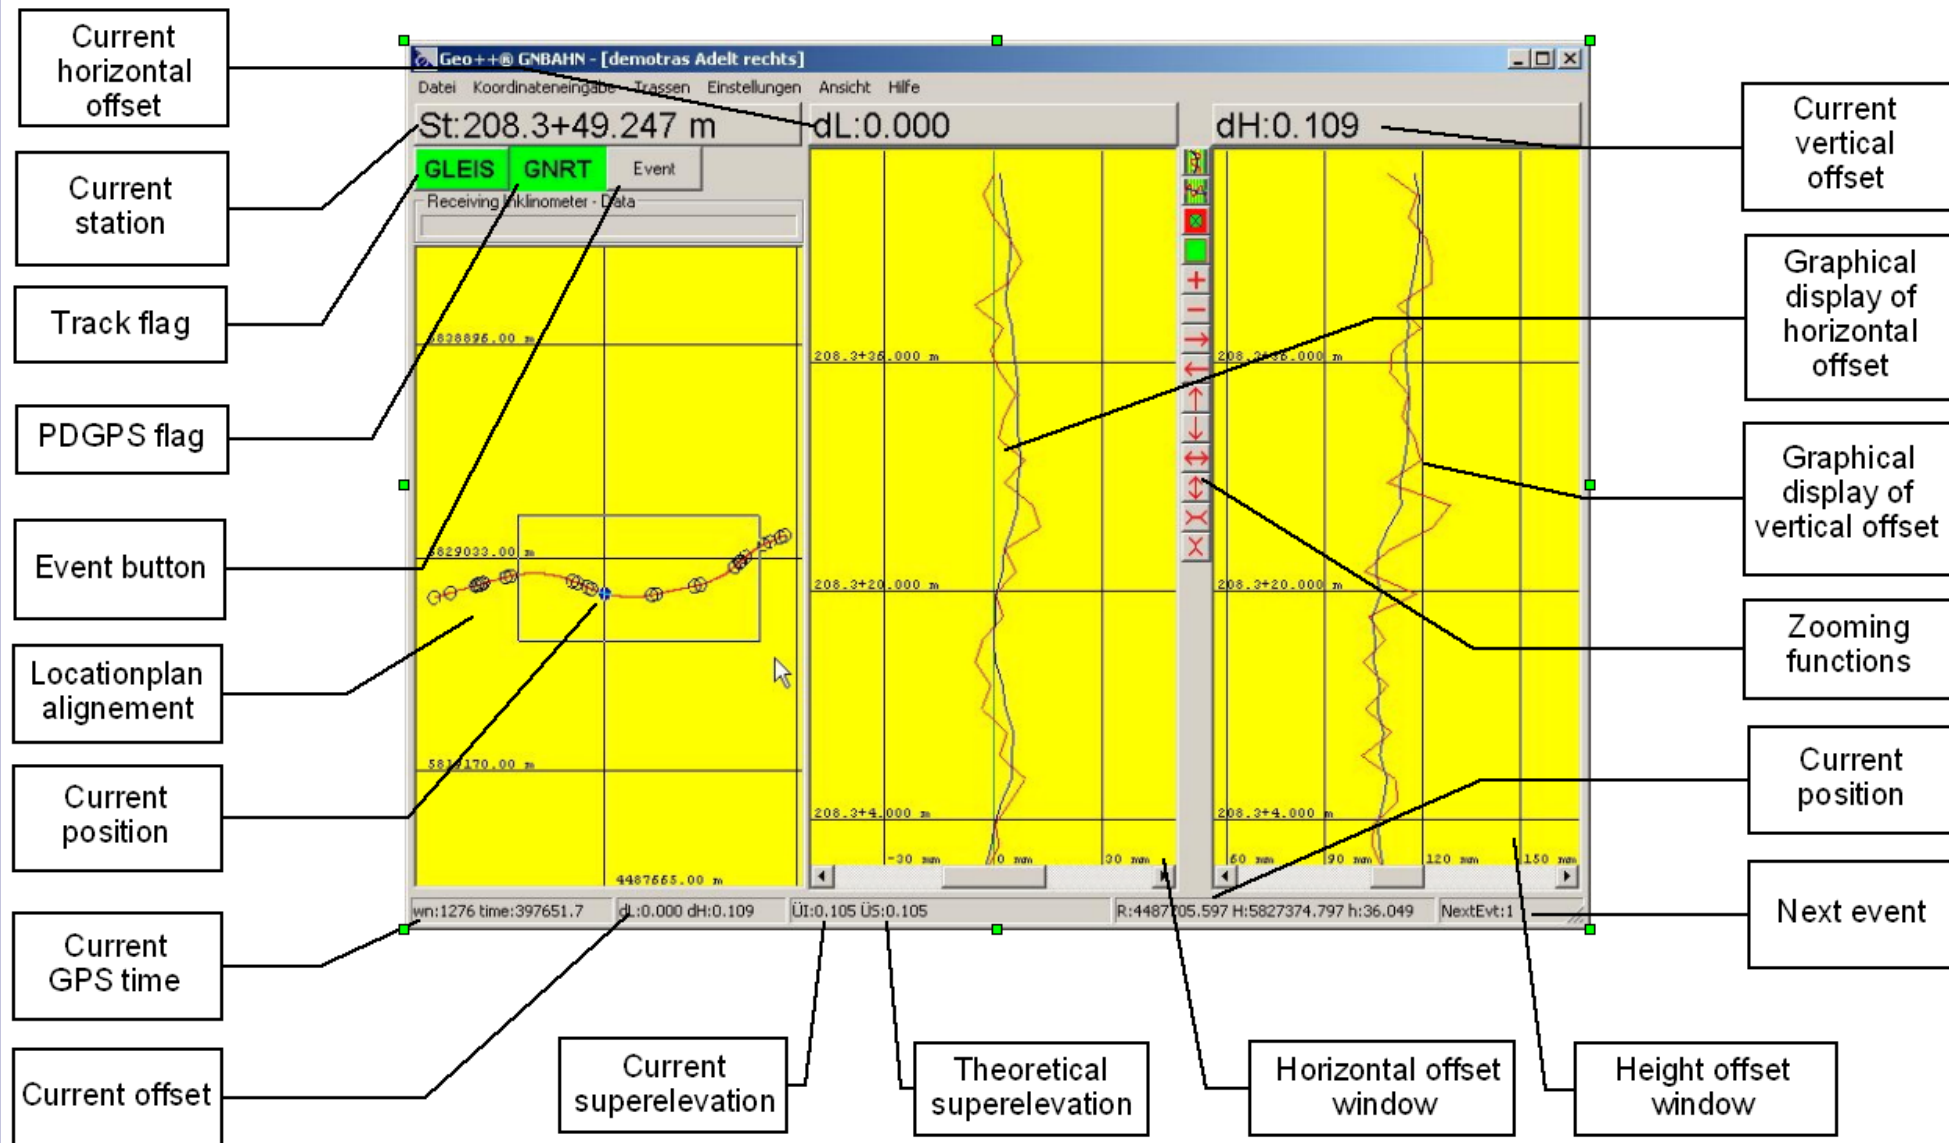

GNBAHN – Hardware

- SURVER
„Spurzentrierter und Rollender
Vermessungsträger“
- GPS/GLONASS receiver
- GPS/GLONASS antenna
- GSM/Radio modem
- GSM/Radio antennae
- Inclinometer (superelevation)
- Extensometer (gauge)
- Notebook
- Power supply

GNBAHN – Main window

- 3D determination of real track
 - Coordinates, superelevation, gauge
 - Computation of theoretic geometry (straight line, clothoid, gradient, ramping, ...)
- Malposition in real time
 - Machine control
 - Control survey
- Advantages
 - Two person transport and employment
 - Measurement velocity 3km/h
 - Stop of railway traffic not required
 - Disassembly possible for easy transport

- Measurement
 - Prepare reference stations on reference points
 - Prepare SURVER
 - Starting of PDGPS and GNBAHN System on SURVER
 - Calibration of Extensometer and Inclinator (one time per day)
 - Observations of track in 2 directions (in real time: 3D coordinates, offsets, superelevation and gauge)
- Analysis
 - Combination of measurement in 2 directions
 - Filtering
 - Further processing like route selection (straight line, clothoid, gradient, ramping, ...)

GNBAHN – Accuracy

- Horizontal 5 - 10 mm, vertical 10 - 15 mm
- A posteriori standard deviation of route selection adjustment
 - Source: company „Vermessungsbüro Riemenschneider“

From [km]	To [km]	Distance [km]	One track	Two tracks	Count of tracks	Surveyed (away+back) [km]	Std.Deviation horizontal [mm]	Std.Deviation vertical [mm]
41	50	9		X	2	36		
5	9	4	X		1	8		
22,8	25,1	2,3	X		1	4,6	6	10
30,3	35,4	5,1		X	2	20,4	8	13
45,1	46,3	1,2		X	2	4,8	5	6
47,4	48,8	1,4		X	2	5,6	6	8
49,6	50,7	1,1		X	2	4,4	6	9
76,6	83	6,4	X		1	12,8	7	10
30,36	35,42	5,06		X	2	20,24	8	13
68,86	72,05	3,19	X		1	6,38	8	14
84,97	88,14	0,83	X		1	1,67	6	10
87,52	88,14	0,62	X		1	1,24	6	16

		Sum [km]				Sum [km]	Mean [mm]	
		94,72				270,5	6	11

GNBAHN - EMSAT

- Combination
 - GNSS absolut information
 - Laser long chord relative information
- Advantages
 - Improved absolute accuracy (1 – 5 mm)
 - By-pass of shadowing effects of GNSS (Bridges, ...)

- Coordinates
 - Local
 - Crossing status within country
 - Crossing borders between country
 - European
 - Homogenous coordinates Europe-wide

Coordinate transformation

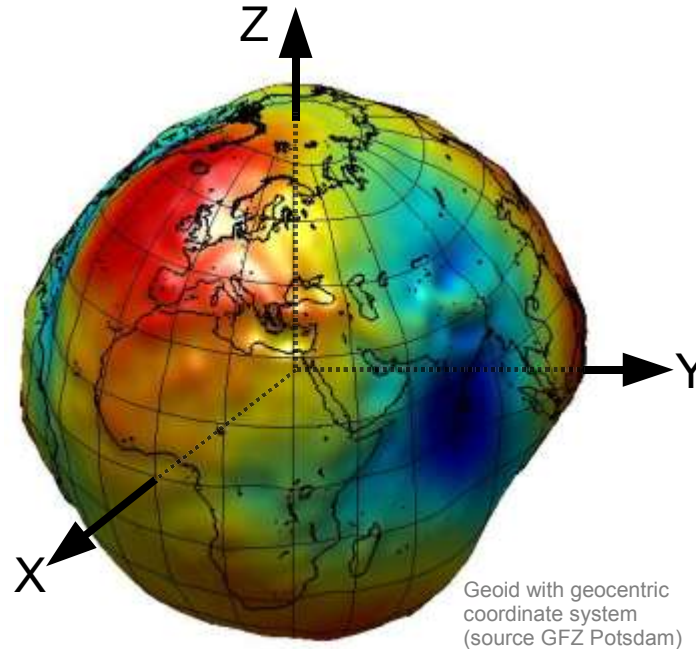

- Enables
 - Transformation between global and local systems
 - Simultaneous use of global and local systems

Modern coordinate systems

- Three-dimensional coordinate system

- Geocentric

- Why?

- Satellite geodesy, ...
 - Accuracy, consistency, internationally, globally, ...

- e.g. WGS 84, ITRS xx, ETRS xx

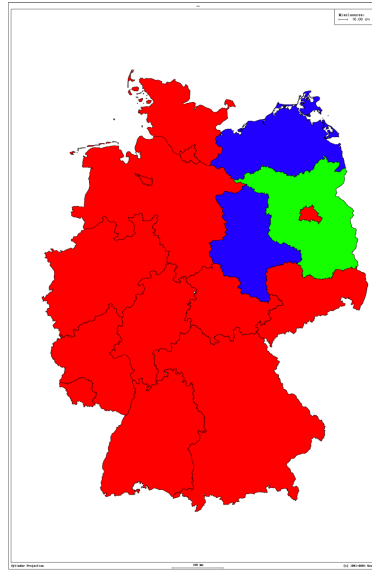

Other coordinate systems, case study: Germany

- Surveying in Germany is a task of the states

- Therefore **different**:

- Geodetic datums
- Ellipsoids
- Projections
- Height systems

- Situation German-wide
 - Non-homogeneous coordinates for surveying and mapping applications
 - Discontinuities/coordinate jumps at state boundaries

Local transformation

Local transformation

Local transformation

Local transformation

Local transformation

Local transformation

Adjacency preserving transformation

- **starting with**
 - consistency

- **resulting in**
 - consistency

transformation/projection
independent/identical

Disturbed adjacency (non-continuous)

- **starting with**
 - consistent projection
- **resulting in**
 - inconsistent projection

transformation/projection
independent/not identical →

Local transformation/ Adjacency preserving transformation

- Problem: local transformation
 - Individual sets of identical points
 - Individual sets of transformation parameters
 - Distortions
- Solution: one consistent adjacency preserving transformation
 - Pre-requisite for general transformation module

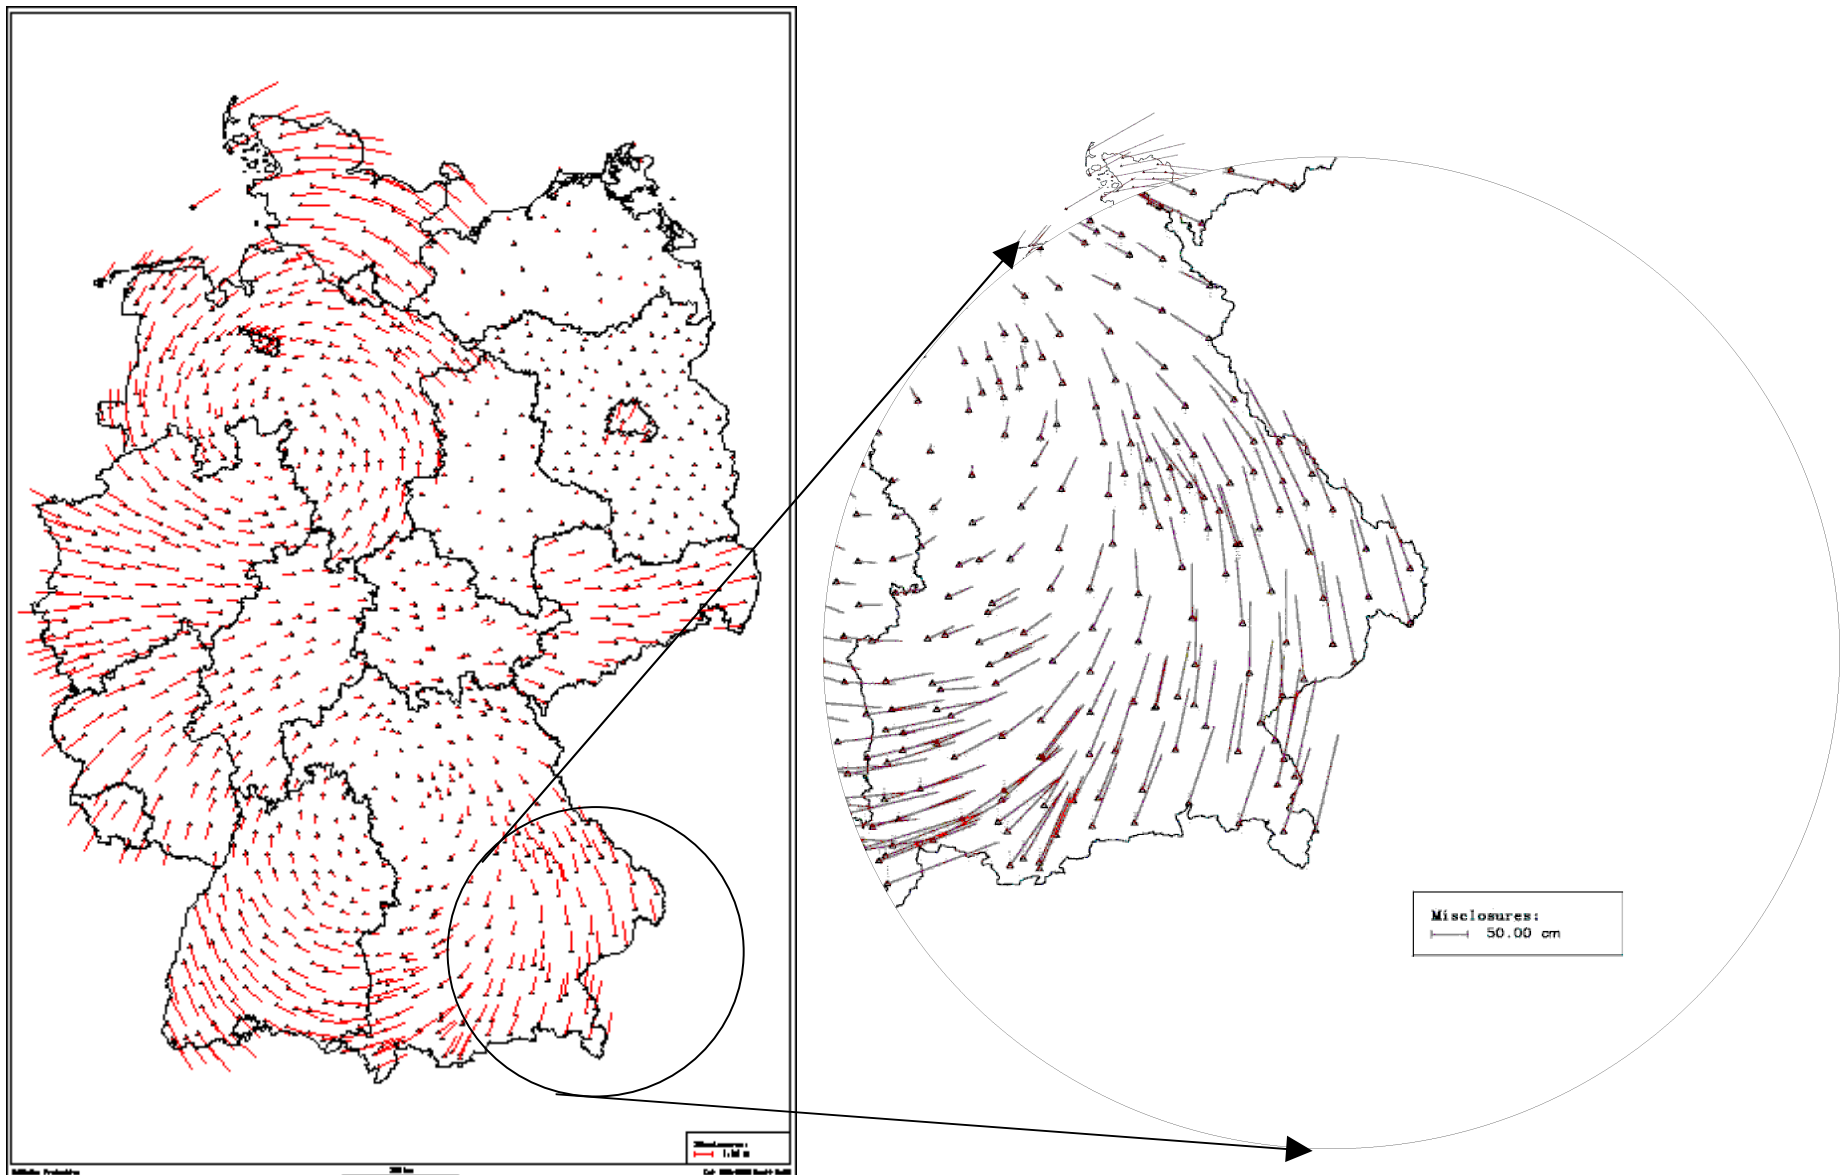

Local transformation/ Adjacency preserving transformation

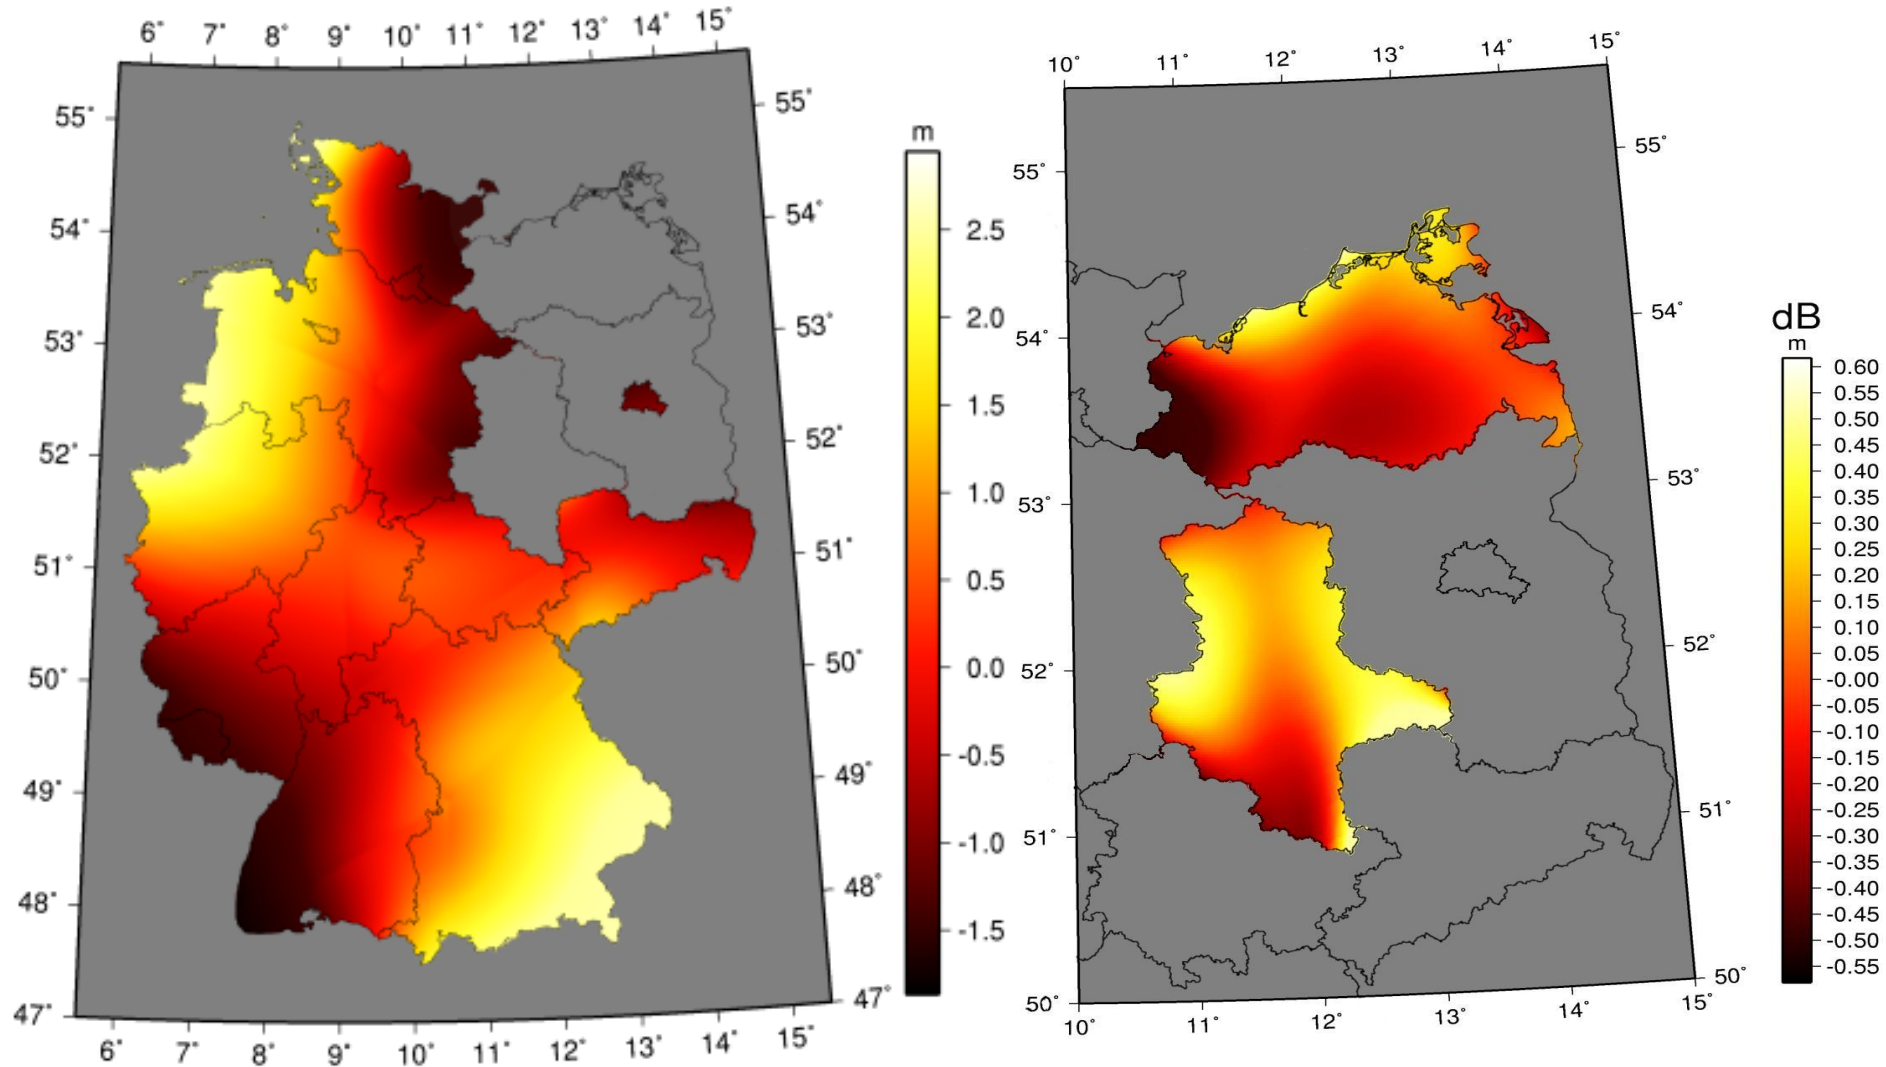

- Problem: local transformation
 - Individual sets of identical points
 - Individual sets of transformation parameters
 - Distortions
- Solution: one consistent adjacency preserving transformation
 - Pre-requisite for general transformation module

GNTRANS – Distortions of official coordinates

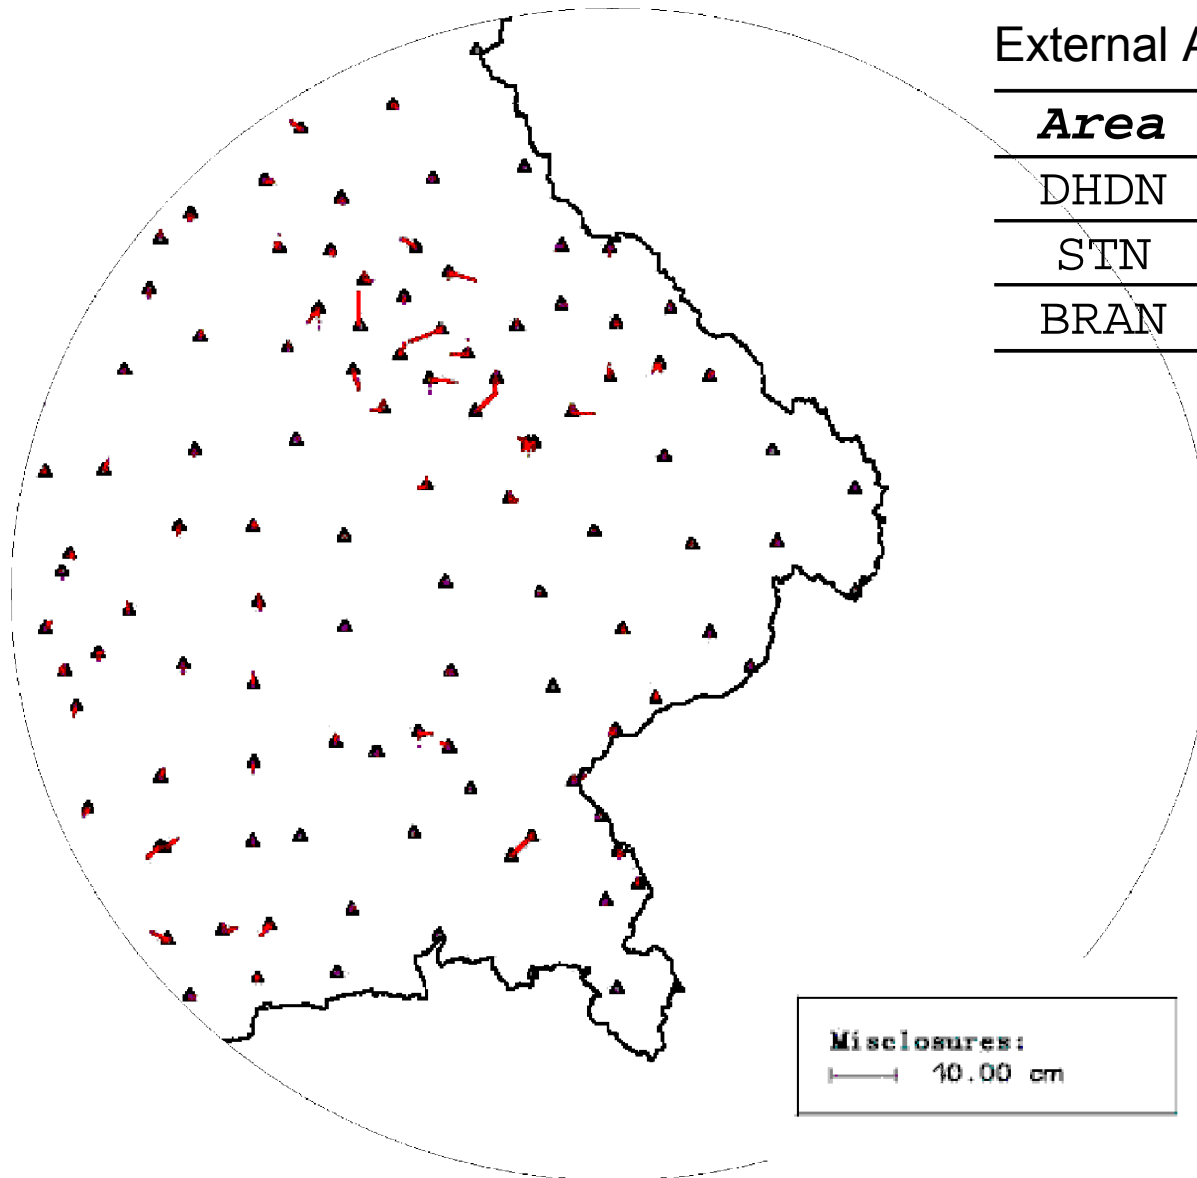

GNTRANS – Functional models

GMT 2001 Jul 30 15:07:20

GNTRANS – Horizontal residuals after transformation

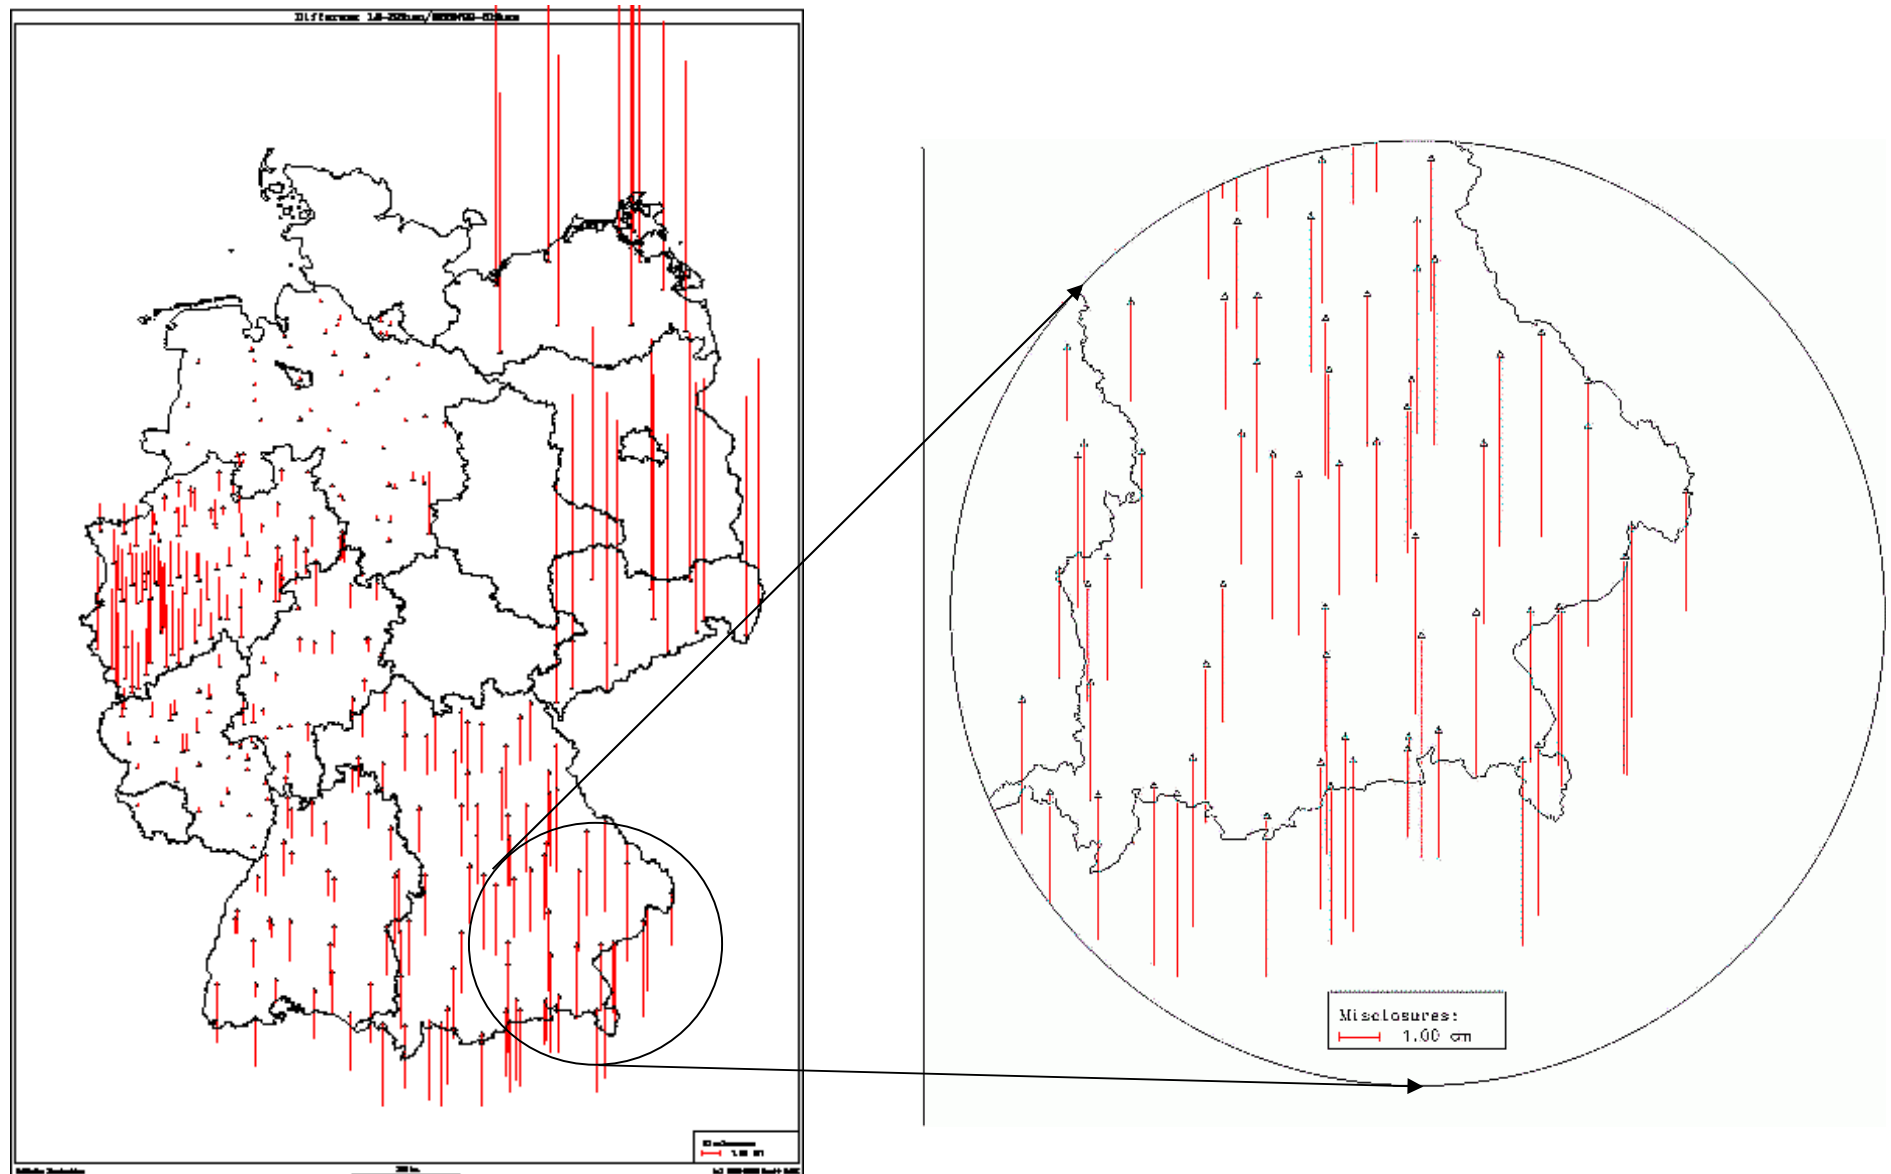

External Accuracy (GNTRANS-D)

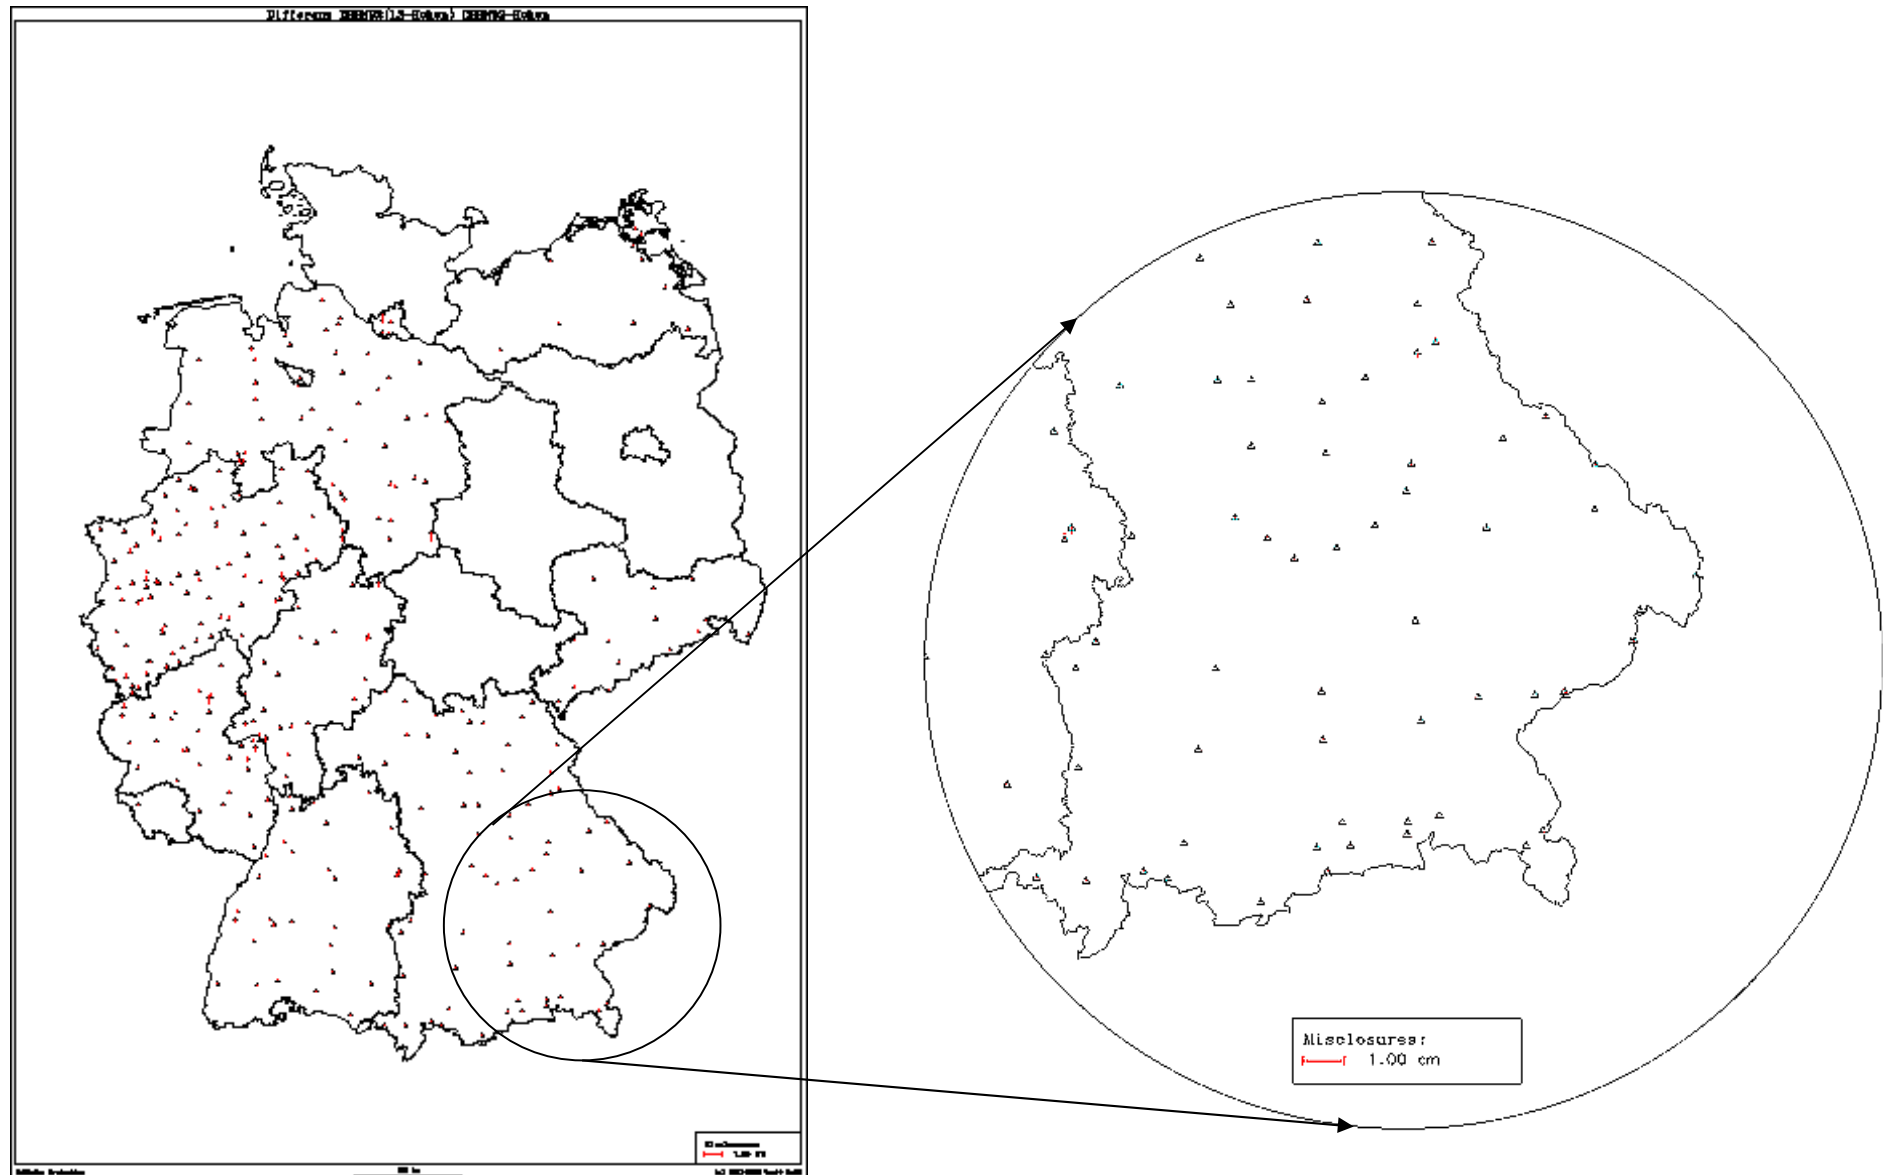

<i>Area</i>	<i>sx [m]</i>	<i>sy [m]</i>	<i>sz [m]</i>
DHDN	0.047	0.046	0.027
STN	0.007	0.013	0.006
BRAN	0.000	0.000	0.010

Misclosures:
— 10.00 cm

GNTRANS – Vertical differences

GNTRANS – Vertical residuals after transformation

- Properties of transformation model
 - Preservation of adjacent metric properties
 - Uniqueness / standardized
 - Homogeneity
 - Continuity
 - Consideration of discontinuities
 - Bijective (one-to-one mapping)
- One transformation model
 - Better integration and automation
 - Minimal logistic effort
 - User-friendly
 - Economics

- GNBAHN
 - Satellite aided track survey
 - Equipment and software for determination of absolute 3D track coordinates
- GNTRANS
 - Transformation instrument to handle modern and inhomogeneous coordinates

**GNSS technology
no matter what coordinates**

Thank you for your attention!
